PREFACE TO THE EIGHTH EDITION.

The object of this List is to enable those interested in the living collection of the Zoological Society of London to ascertain what species of Vertebrated Animals have been represented in the Menagerie during the past twenty years. It is also of great use to enable the specimens exhibited from time to time to be labelled on a uniform system.

The first edition of the List was issued in 1862, and contained the names of all the animals that had been living in the Society's Gardens at any time during the previous year, with their habitats, and the dates and modes of their acquisition.

In the second edition, issued in 1863, the animals living in the Society's Gardens from the 1st of January to the end of May of that year were given in a similar form.

In the third edition, which was completed for press on the 1st of January, 1865, the names of all specimens received by the Society during 1864 were added to the List.

In the fourth and subsequent editions the names of all the vertebrated animals added to the Society's collection during the following years were inserted in their proper places.

In the present (eighth) edition of this Catalogue I have pursued exactly the same system, and have added the names

of all the animals that we have received up to the end of 1882, with the date and mode of acquisition of each specimen.

The result is a nearly complete catalogue of all the living Vertebrates received by the Society during the past twenty-two years. It is not, however, *quite* complete, as in the two first editions the references to some of the specimens which had been lost by death or departure were struck out. But commencing from January 1st, 1864, I believe that nearly every specimen received will be found to have been inserted in its proper place, although there may of course have been errors in the determination of the species.

For many years it has been my practice to bring before the scientific meetings of the Society short notices of the more important accessions to the Menagerie, with the object of calling attention to such as are of special interest. These notices are subsequently printed and published in the 'Proceedings' of the Scientific Meetings. Both our 'Proceedings' and 'Transactions' also contain frequent communications referring to specimens living, or that have previously lived, in the Society's Gardens. I thought that it would enhance the value of the List to add references to the 'Proceedings' and 'Transactions' in all these cases, so as to make a sort of index to numerous passages in our scientific publications that refer to specimens in the Society's collection.

When animals have been figured in our publications from specimens in the Gardens, a reference to the figure is likewise added.

The following Table gives the number of Species of each Class of Animals registered in the successive editions of this List, and thus to a certain extent indicates the progress of the Collection:—

	First Edition, 1862.	Second Edition, 1863.	Third Edition, 1865.	Fourth Edition, 1866.	Fifth Edition, 1872.	Sixth Edition, 1877.	Seventh Edition, 1879.	Eighth Edition, 1883.
